

Integrating eChecker© with MegaWest©

The eChecker© service by Covivitas can be integrated seamlessly with your MegaWest© practice management system. Reports can be run from the eChecker data, receipts can be created for charts and records, ACCESS query statements can be created using the eChecker results as criteria and even labels can be made.

How the eChecker© integrates with MegaWest©:

1. A flat file is imported into the UniVerse database and is parsed into a UniVerse file
2. The parsed file is then linked to the Appointment (APPT) file through the dictionary item MEDI.ELIG.
3. As the eChecker gathers the eligibility information every night, the parsed file is updated and expanded with the most recent results.

eChecker© output in MegaWest©:

The eligibility results can be accessed three ways by the clinic. First, the clinic can run our “canned” eChecker© report – this report includes patient information, appointment information and eligibility results. This report can be customized to the clinic’s specifications and can be run automatically every morning as part of the eChecker© process.

The clinic staff can also obtain the eChecker© results by using the UniVerse query language ACCESS. Here are some examples:

1. This will give you a list of all appointments with some sort of Eligibility response:

```
> SORT APPT WITH MEDI.ELIG <> " " MEDI.ELIG
```

2. This will give you a list of all appointments on February 15, 2004 with no recorded eligibility:

```
> SORT APPT WITH !DATE = "02/15/2004" AND WITH MEDI.ELIG = "NO RECORDED ] "
```

3. This will give you a list of appointments from February 22 to February 29 with valid eligibility:

```
> SORT APPT WITH !DATE >= "02/22/2004" AND WITH ! DATE <= "02/29/2004" AND WITH MEDI.ELIG <> "NO RECORDED ] " AND WITH MEDI.ELIG <> " "
```

The eChecker© output can also be exported to a Microsoft Access file. This file can then be used to print labels or other custom output. The Access file can be customized to include MegaWest© information as well as eChecker© information.
